

Startup Screen

LASI is a tool for parsing up to 5 documents for important words and phrases based on meta-analysis of all documents. The startup screen is the first thing you see when you open the program. It will load with a Windows 8 style window screen, where the window can be moved by clicking anywhere that isn't a button and dragging the screen to the desired location. It has a minimalist design that contains a graphic banner containing the name of the program and an image of a silhouette of a collie. The startup screen only contains three buttons. From this screen, you can either create a new project or load an existing project. Clicking on either the create button or the load button will expand the startup screen to allow you to either create a new project or load an existing project respectively. There is also an X button at the top right corner of the application that terminates the program when clicked.

Create Project

The create project screen will provide a text field to name your project, called “Name” a text field that is connected to a browse button to allow you to select the destination folder for the project, called the “Location”, and a text field connected to a browse button called “Documents” where you can find an add documents to the project. A list of already added documents will be displayed on the right of these options. You can remove documents from this list. Once you add five documents, the “Documents” field will be grayed out and you will no longer be able to add documents. If you attempt to name a project the same name as another project, a message will be displayed that indicates that you can not do that. If you attempt to use a location on your computer that has already been created by another project, a message will display indicating that you can not do that. If you leave any of the fields blank, or don’t select any documents, the application will point out which fields need to be filled out before you can create a project. You can also select “Create” or “Cancel”, which are located below the Name, Location, and

Documents fields. Create will take you to the project preview screen. Cancel will return you to the startup screen.

The image shows a software window titled "LASI" with a black silhouette of a dog and the word "LASI" in red, with a red paw print above the 'i'. The window has a close button (X) in the top right corner. Below the title bar, there are two buttons: "Create" and "Load".

The main area of the window is titled "Create New Project" in red. To the right of the title are three black paw prints. Below the title, there are three input fields with labels: "Name:", "Location:", and "Document:". The "Location:" field contains the text "ers\Dustin\Documents\LASI Proiects\". To the right of each input field is a "Browse" button. Below the input fields are two buttons: "Create" and "Cancel". To the right of the input fields is a large empty rectangular box.

This feature has not yet been implemented. However, it will contain a similar text field associated with a browse button that will allow you to browse your computer for a file created by exporting the results of LASI analysis to a file.
